A survey is made to systematize the information re-
lated to the methods of longwave infrared spectroscopy
and to recent Soviet and non-Soviet apparatus for ob-
taining and recording spectra for wavelengths up to
1600 μ . A table gives the basic characteristics of labo-
ratory type spectrometers for obtaining and recording
longwave infrared spectra which have been constructed
from 1932 through 1956.

Consideration is given to the question of quantum
effects when free electrons interact with high fre-
quency fields. Essentially, quantum effects in this
case are negligible. However in principle it is possi-
ble to measure certain of these effects. Also certain
quantum effects, generally speaking, are not negligi-
